Description

The Field Type handles a block of multiple lines of unformatted text. It is capable of handling up to 16,777,216 characters.

Input expectations

Type	Example
string	"This is a block of unformatted text"

Value object

Properties

The Value class of this Field Type contains the following properties:

Property	Type	Description
\$text	string	This property will be used for the text content.

String representation

A TextBlock's string representation is the the \$text property's value, as a string.

Constructor

The constructor for this value object will initialize a new Value object with the value provided. It accepts a string as argument and will import it to the \$text attribute.

Validation

This Field Type does not perform any special validation of the input value.

Settings

Settings contain only one option:

Name	Type	Default value	Description
textRows	integer	10	Number of rows for the editing control in the administration interface.
