

Service tags

eZ Platform offers various container service tags. They can usually be used to extend existing features by registering services as specific extension points. This page lists all DIC tags exposed in eZ Platform.

Core & API

Tag name	Usage
<code>router</code>	Adds a specific router to the chain router
<code>twig.loader</code>	Registers a template loader for twig
<code>ezpublish.content_view_provider</code>	Registers a ContentViewProvider for template selection depending on content/Location being viewed
<code>ezpublish.storageEngine</code>	Registers a storage engine in the Repository factory
<code>ezpublish.fieldType</code>	Registers a Field Type

Legacy

Tag name	Usage
<code>ezpublish.storageEngine.legacy.converter</code>	Registers a converter for a Field Type in legacy storage engine
<code>ezpublish.fieldType.externalStorageHandler</code>	Registers an external storage handler for a Field Type
<code>ezpublish.fieldType.externalStorageHandler.gateway</code>	Registers an external storage gateway for a Field Type in legacy storage engine
