Name	Internal name	Expected input type
TextLine	ezstring	string

Description

This Field Type makes possible to store and retrieve a single line of unformatted text. It is capable of handling up to 255 number of characters.

PHP API Field Type

Value object

Properties

The Value class of this Field Type contains the following properties:

Property	Туре	Description
\$text	string	This property will be used for the text content.

String representation

A TextLine's string representation is the the \$text property's value, as a string.

Constructor

The constructor for this value object will initialize a new Value object with the value provided. It accepts a string as argument and will import it to the text attribute.

Validation

The input passed into this filed type is subject of validation by the <code>StringLengthValidator</code> valid ator. The length of the string provided must be between the minimum length defined in <code>minStringLength</code> and the maximum defined in <code>maxStringLength</code>. The default value for both properties is 0, which means that the validation is disabled by default.

To set the validation properties the validateValidatorConfiguration() method needs to be inspected, which will receive an array with minStringLength and maxStringLength like in the following representation:

```
Array
(
    [minStringLength] => 1
    [maxStringLength] => 60
)
```
