Supported eZ Publish versions in the cloud

Currently the following versions are supported in the eZ Publish Cloud solution:

- eZ Publish 4.7
- eZ Publish 5.1 LS* (Legacy Stack)

*LS means that that only legacy stack is supported. Running eZ Publish with Symfony is yet not supported.

Support for eZ Publish 5.2 (with Symfony stack) is in progress. Cloud support for eZ Publish 4.7/5.1LS will be discontinued shortly after 5.2 support is made available. Customers should therefore expect to be forced to upgrade and deploy their website on eZ Publish 5.2 by end of Q1 2014
