ez_file_size

- Description
- Prototype and Arguments
- Usage

Description

`ez_file_size()` is a Twig helper (Twig filter) which is mostly a byte calculator. It will convert a number from byte to the correct suffix (from B to EB). The output pattern will also vary with the current language of the site access (e.g. choosing between coma or point pattern).

It returns a string.

> The byte factor is 1000 instead of 1024 to be more familiar for users.

Prototype and Arguments

integer **number_of_bytes**|ez_file_size(integer **number_of_decimal**)

Argument name	Type	Description
number_of_bytes	`integer`	The number in byte we want to convert
`number_of_decimal`	`integer`	The number of decimal we want our output to have

Usage

```
{{ 42698273|ez_file_size( 3 ) }} //Output with french site access : 42,698 MB

{{ 42698273|ez_file_size( 4 ) }} //Output with english site access : 42.6983 MB
```
