Known issues in 5.2

The following two lists of issues are for legacy (4.x) and Symfony (5.x) stack respectively as eZ Publish 5.x contains both.
The bug tracker for eZ Publish, from which these lists are extracted, is available at https://jira.ez.no

Key	Summary	T	Created	Updated	Due	Assignee	Reporter	P	Status	Resolution
EZP-22309	5.x kernel & legacy kernel does not share db connection	●	Feb 06, 2014	Feb 06, 2014		Unassigned	André Rømcke	↑	CLOSED	Won't Fix
EZP-22898	Date FieldTypes does not support time beyond 2038	💡	May 21, 2014	Oct 12, 2015		Unassigned	Pedro Resende	↑	CONFIRMED	Unresolved
EZP-19541	Login with DebugByUser enabled is not possible in ezp500	●	Jul 23, 2012	Jan 26, 2016		Unassigned	João Pingo	↓	CLOSED	Won't Fix

Known limitation

First level folders or other container objects in your content structure can't have the same name as the existing siteaccesses if you configured your site to use URL access method.
Considering an existing "ezflow_site" siteaccess exists, if you create a folder with the same name and try to access it using `http://<your_sit e>/ezflow_site` you will be redirected to the siteaccess instead on accessing your "ezflow_site" folder.
This is actually a known limitation of the URI siteaccess matching.

If you need to use first level folders or other container objects with the same name as any of your siteaccesses we suggest you to use hostname matching instead.

For more details on configuring hostname matching, please check the Siteaccess Matching documentation.
